GeneOne, DASA (Organization ID 508087)	GeneOne, DASA submitted 110 novel variant interpretations.
Phosphorus, Inc. (Organization ID 506098)	Phosphorus, Inc. submitted 104 novel variant interpretations.
Coming soon: new values of clinical significance for variants with low penetrance and risk alleles	<p>We are adding new terms for the clinical significance (interpretation) of variants with low penetrance and risk alleles, based on this white paper from ClinGen:</p> <p>https://clinicalgenome.org/site/assets/files/4531/clingenrisk_terminology_recomendations-final-02_18_20.pdf</p> <p>The new terms are:</p> <ul style="list-style-type: none"> • Pathogenic, low penetrance • Likely pathogenic, low penetrance • Established risk allele • Likely risk allele • Uncertain risk allele <p>We are also updating how we report a list of values in the aggregate clinical significance when there are terms on the scale from pathogenic to benign and other kinds of terms like drug response. These terms will be listed with a semi-colon delimiter, instead of a comma, to accommodate some of the new terms that include a comma. The aggregate clinical significance is represented in the VCV XML by the element InterpretedRecord/Interpretation/Description, and in the VCF file as the CLNSIG info tag.</p> <p>e.g. for Variation ID 48692, the aggregate clinical significance will change from</p> <p>Pathogenic, drug response</p> <p>to</p> <p>Pathogenic; drug response</p> <p>These changes have been pushed back to a March deployment. So they are not in this release but are expected to be in the next monthly release in April.</p>
